KELTEN ARMS TR15

The next evolution in the AR-ecosystem

The Kelten Arms TR15 is an innovative pump-action hybrid rifle based on the globally established AR-15 platform. It combines familiar ergonomics with a modern, manually operated system — unlocking entirely new market potential.

UNIQUE MARKET POSITION

The TR15 is one of the most widely compatible systems within the **AR-15 ecosystem** — one of the most widely used firearm platforms in the world. This allows existing components, accessories, and user experience to be utilized to their fullest extent.

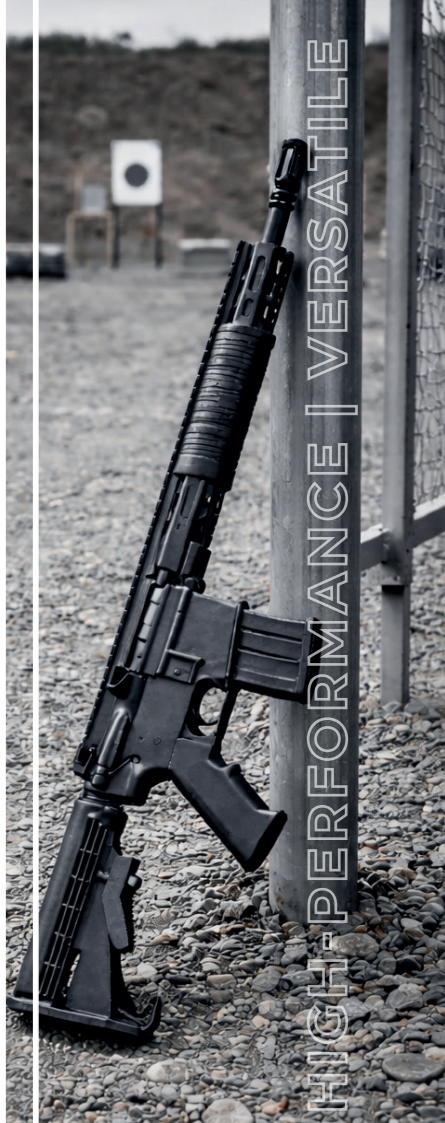

GLOBAL MARKET POTENTIAL

The TR15 can be sold anywhere where semi-automatic firearms are prohibited, opening access to international markets that are otherwise unreachable with traditional AR-15 systems.

In addition, the TR15 offers significant potential through the ability to convert existing semi-automatic systems into manually operated rifles — enabled by Kelten Arms' patented technology.

KELTENARMS

HIGH-PERFORMANCE | VERSATILE

RELIABLE | HONEST

YOUR ADVANTAGES AT A GLANCE

- Maximum AR-15 compatibility (Mil-Spec components)
- Innovative pump-action system for high reliability
- Operation via pump-action, side-charging handle or standard charging handle
- Enables dynamic, fast shooting as well as high precision
- A versatile solution for various applications

TECHNOLOGICAL EDGE

Two patents were filed in 2026:

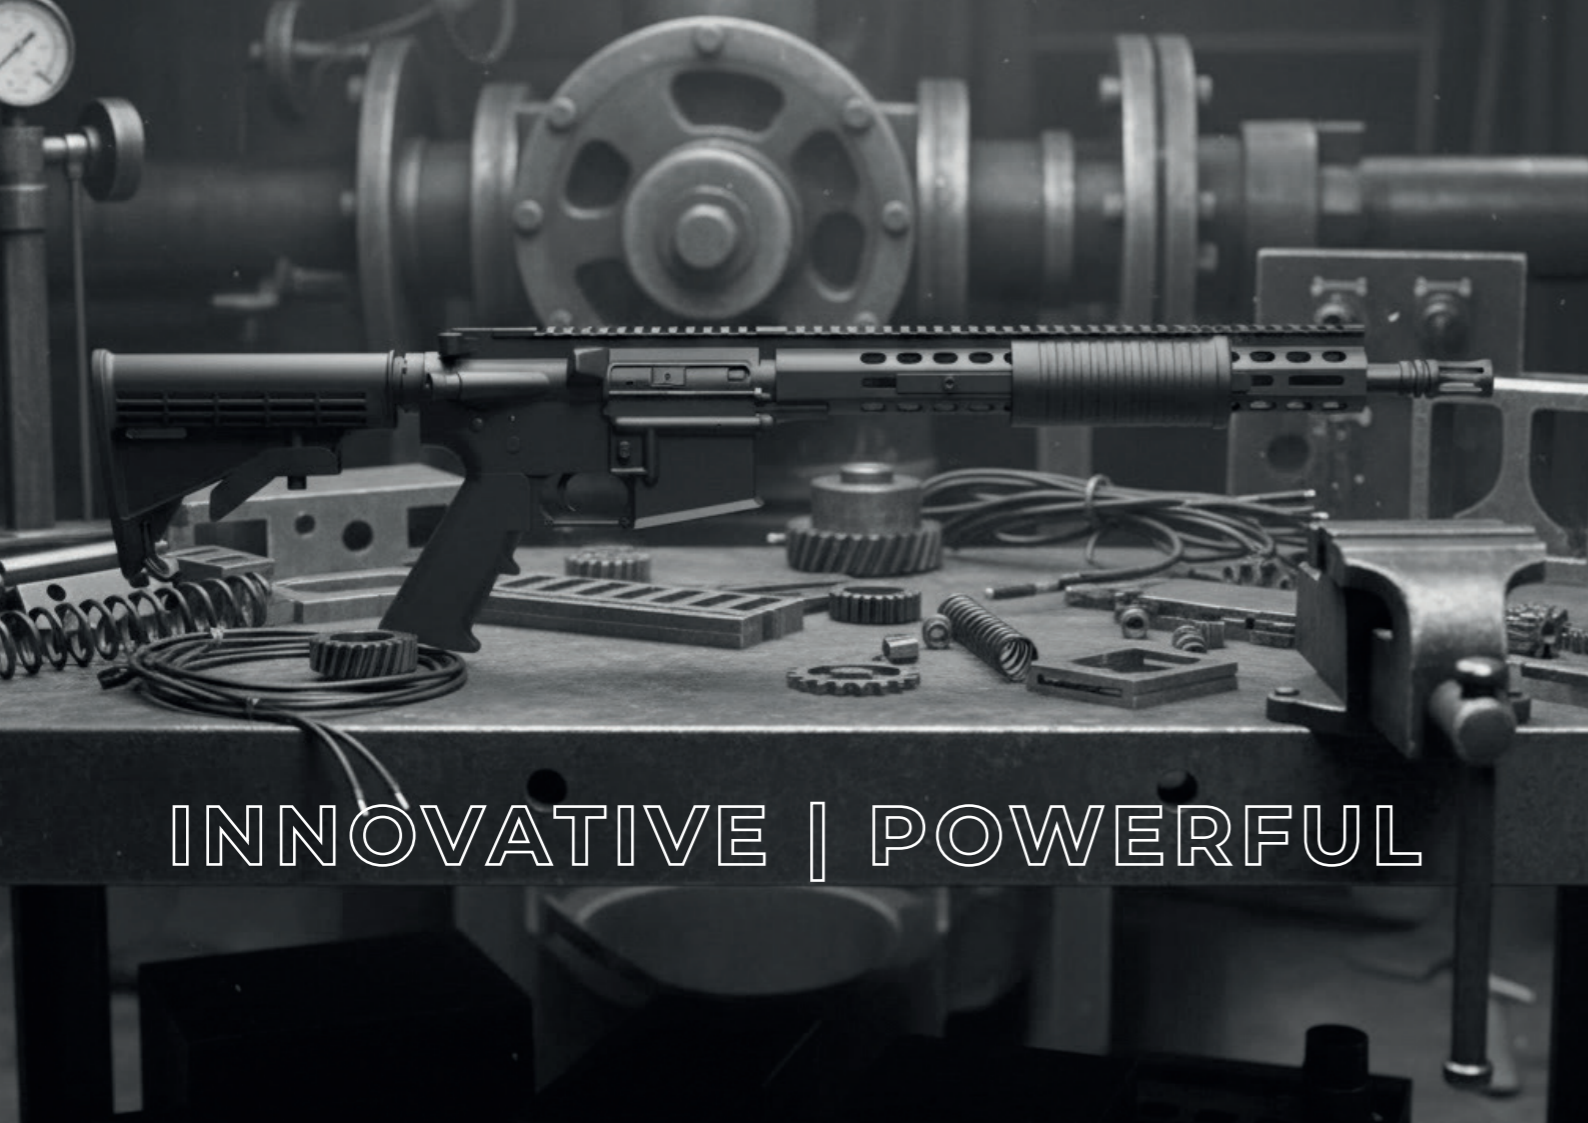

- Rail-guided pump handle system
- Self-centering operating rod

Even in the unlikely event that the patents are not granted, Kelten Arms maintains a development lead of approximately two years over potential competitors.

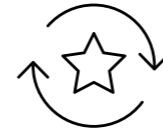

TR15

PRECISE | PROFESSIONAL

INNOVATIVE | POWERFUL

PRODUCTION & EXPANSION

Production is scheduled to begin in Austria at the end of 2026.

Key components will be produced in Europe.

FLEXIBLE BUSINESS MODEL

- Sale of complete firearms
- Distribution of patented key components
- Conversion solutions for existing systems

TECHNICAL DIFFERENCE TO SEMI AUTO AR-15

- Pump action unit mounted on slightly modified AR-15 handguard
- no gas port, no gas block, no gas tube
- modified bolt carrier
- modified bolt head

TECHNICAL DATA

Currently available calibers:	.223 Rem., .300 AAC
Calibers in development:	308 Win., 9mm Luger, .22 Lr
Barrel length in .223 Rem:	14,5"
Barrel length in .300 AAC:	12,5"
Approx. weight in .223 Rem:	3000g

MAIN ADVANTAGES IN COMPARISON TO OTHER PUMP ACTION RIFLES

- high compatibility to the AR-15 (eg. lower receiver)
- spring loaded bolt carrier group and working bolt catch
- no fixed connection between pump action unit and bolt carrier group
- loading via pump-action, side-charging handle or standard charging handle

CONCLUSION

The Kelten Arms TR15 is more than just a product — it is a platform with global growth potential. It combines innovation, market insight, and strategic positioning into a future-proof concept.
